# Magnetic Water Treatment

## Implosive Fluid Treatment Device

It feeds water or any fluid into a phase conjugate magnetic array, using a piezoelectric directional nozzle, creating implosive 'black hole' flux lines. The custom implosive magnet core gaps converge in a potent centripetal cone, the result being the known principal and completion of implosive magneto- electric flux hydrodynamic flow – creating mono-molecule stability. This has never been achieved before.

The drastically reduced molecular cluster size solubility produces from our validated testing:

- The 'absorption efficiency effect' has produced measurements of up to 300% growth increase using our magnetic treated water.
- Agricultural implications for commercialization are profound.
- Polluted water is passed through breakthrough magnetic treatment and immediate sedimentation occurs, effectively separating and removing pollutants and making water potable.
- Dramatic increase in sedimentation rates, increasing industrial efficiencies which saves energy
- Can be used for major bottlenecks in technology e.g. to convert gas and oil from Tar Sands – which at present is uneconomic but with our technology can become highly economic,

### Note:

- Governments would not be able to use GM foods or excess chemicals if we prove to them we have better cost effective technology for increasing agricultural yields, including for third world communities.
- We fully expect to re-invent water treatment for sewage, saving billions for local governments and third world communities

## Domestic Use

- Since the size of the appliance can be just a tube about 15-20 inches long with a vortex input, and the mechanism is as simple as plumbing into any normal home flow rate, the application for home devices – is simple and economic. Revitalized home water can be achieved quickly and easily.

*Phase Conjugator*

# The Fuel Imploder Enhancer

## Fuel Efficiency Treatment

Fuel consumption can be reduced by as much as 30-50%, saving billions and saving the planet from harmful emissions. Molecular cluster size decreases by using Magnetic Phase Conjugate Hydrodynamic technology and at the same time increasing atomization efficiency and therefore much increased fuel efficiency.

Our Liquid Fuel Imploder is the holy grail of the liquid fuel treatment process. The unique phase conjugate atomization effect can be used for any combustion e.g. car, truck, trains, aviation, home and commercial heating, power plants and any industrial use.

**Competition** Magnetic fuel pre-treatment has had limited success in the past and have been marketed before- but not at nearly the flux densities or the combined effect of PHASE CONJUGATION - with hydrodynamic implosion. What is new is the phase conjugate magnetics and our new understanding of how the phase conjugate field is made.

**The Technology** Treats fuels (like gas, diesel, oil) just prior to combustion for radical improvement in atomization efficiency – and resulting in highly significant economy improvement in fuel burn efficiency.

Fuel consumption improvements are good for the environment, reduce consumption, enable car manufactures to redesign cars better with hybrid technology, with radically improved MPG and enable fuel 'mixtures' with ethanol to combine more efficiently. And it saves a huge amount of money for governments, businesses and consumers.

Our Liquid Fuel Imploder is the holy grail of the liquid fuel treatment process.

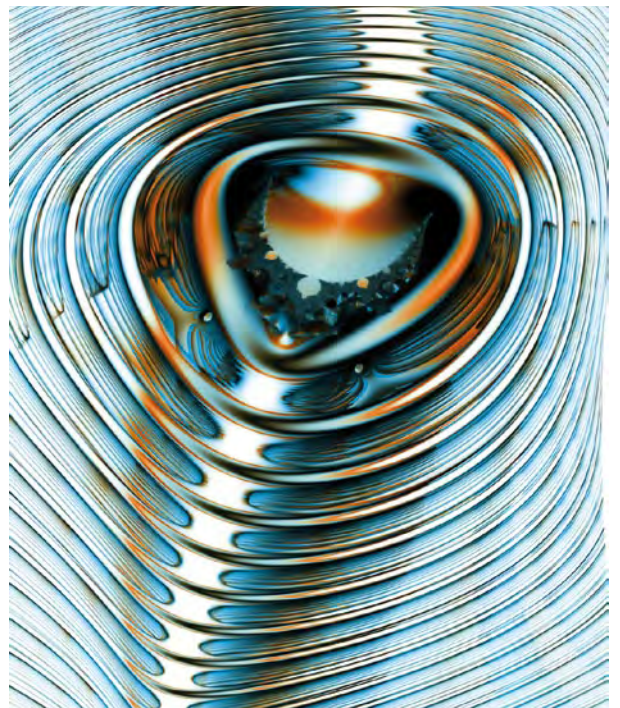

# Golden Ratio Hydrogen Energy

New ground breaking research in establishing precise frequency tunings based on Plank, Golden Ratio and Hydrogen atom. These frequency recipes may be the most important and powerful that have ever been researched on this planet. The golden ratio hydrogen energy fuel project is centered on the discovery and proof of the key frequencies, which efficiently motorize the splitting of hydrogen from water. We now have successfully derived directly from advanced hydrogen physics and have research in place implementing these 'implosive hydrogen' frequency patterns- to revolutionize hydrolysis- and thus energy generation thru hydrogen from only using water.

The new equation is both for its size and for its frequency (time). What this reveals is the specific frequency and field necessary to directly 'ring' the hydrogen atom – like a bell. So instead of broadly slamming it with an offset voltage for hydrolysis - the applied voltage is efficiently applied in only the frequency ratio specifically hydrogen likes to eat (absorb). This is core to each of the above research and development approaches.

This would result in a drastic reduction in the power or wattage – to break hydrogen from water – to make it available to burn directly. This means virtually unlimited energy from water on demand. The commercial possibilities are obviously planetary, revolutionary, carbon neutral, and renewable.

The golden ratio hydrogen energy fuel project is centered on the discovery and proof of the key frequencies, which efficiently motorize the splitting of hydrogen from water.

# Active Bio-Cascade Dielectrics

**(A.B.C.D)**

Phase Conjugate Cascade Dielectrics is the key to bioactive fields and has proven to optimize germination, fermentation, metabolic rates, tissue repair, and sedimentation. When the electric symmetry is fractal and phase conjugate all the LIFE-FORCE energy is massively optimized. We now know the symmetry, frequency recipes and resin sizes to make capacitors (electric fields), which are fractal and thus cause growth and concentration of life force.. We have taken phase conjugation dielectrics and applied critical plank, phi and hydrogen frequencies. This has never been achieved before. This is the physics behind electric fields which help seeds to germinate and can reduce aging, storage of food and many other applications. In fact, the commercial applications are planet changing:

- Fermentation rate increase in food, beer, wine, yogurt and other food producing industries
- Commercial digesters
- BIO-energy and algae fuels e.g. Ethanol production
- Building growth chambers
- An average of a 30% increase in glucose metabolism in our controlled experiments
- Revolutionizing greenhouse agriculture
- achieve longevity
- Medical and anti-aging applications
- impact on healing rates

Did you know that the ability of every liquid inside your body – to support life is simply measured by ReDox potential. The ‘ReDox’ potential has been proven to effectively predict whether any liquid inside biology is going to create health versus disease. Measuring any body of liquid for this plus electrical resistance and acidity is called Biologic Terrain Analysis -which can quickly predict cancer for example. A negative ion is literally like an electric ‘black hole’ caused by FRACTALITY. The ability to make black hole like energy fields is good – because this causes waves of energy or charge to be sorted (into phase -that is wave lengths that fit the nest) and thus clear whatever cannot be perfectly shared or distributed. The reason blood must become electrically attractive to protons (extra ‘electrons’ or ‘electron space’ is associated with alkalinity) – is because – if the blood cannot attract electrical charge - you begin to decay and get sick. Becoming electro negative – that is making space to attract and embed a charged proton - becomes a definition of becoming ALIVE! One nice rather medical example of this ideal: Nobel winning Albert Szent-Gyorgyi in “Electronic Biology and Cancer” figured out the difference between a healthy cell and a cancer cell. At a primary level - the critical difference was the triplet state electron ORDERLINESS OF ITS WATER. Super ordered fractal water geometry – makes CHARGE DISTRIBUTION EFFICIENT – and that is the end of cancer!

# Pain Relief Medical Technology

As little as one treatment to as many as 15 treatments over a period of months shows high efficacy and no side effects.

## Non-invasive pain treatment and elimination

Patented new technology for non-invasive pain relief, free of side effects that can be used continuously to target pain throughout the body. Based on magnetic cascade, which eliminates pain and speeds healing.

A clinically tested method of pain reduction – based on a related principle of MAGNETIC PHASE CONJUGATION

This device utilizes new principles which correctly impedance match external pulsed magnetic fields to non-invasively correct neuronal and other biological informational channels to reduce and eliminate pain. This device can be utilized to treat chronic pain, current injury and surgical recovery and has been successful in over 90% of patients in four major clinical trials. 100% of the patients received highly significant pain reduction in FDA trials at the Sierra pain institute of Nevada. Treatment times are anywhere from 30-60 minutes and depend on the time of pain the patient has been in pain and the source of the pain. As little as one treatment to as many as 15 treatments over a period of months shows high efficacy and no side effects. This is a completely novel non-invasive pain reduction technology

Extensive preliminary evidence that PHASE CONJUGATE MAGNETICS can not only reduce pain but also increase healing rate. We understand the physics – because this creates the magnetic environment of restored fractality – precisely the definition of healing in biologic tissue.

*Developed by Dr. Elizabeth Rauscher*

# Bloom the Desert

Returning LIFE FORCE and LIVING WATER into third world communities with Fractal Field Technologies. With proper understanding of deep primary water- abundant water is available in the Desert. By combining sensitive cutting edge magnetic mapping, we are able to locate deep water – called “primary water”, even in very desert like conditions  
Every body of water is different. We need to understand why deep-water rivers are measurable as phase conjugate – charge distributing efficiently and therefore electrically FRACTAL!

## **Where the Intuitive meets the Scientific**

Certain profound dowsers have become aware of a powerful deep underground water network – the so-called ‘Primary Water’. We combine this knowledge with new information about how the circulation of this water is precisely generating a “phase conjugate dielectric’ due to its purity, makes it traceable in a new way by using capacitive sensors – which can measure phase conjugate fields.

Each individual involved has the capability and documented track record to locate water in most every single desert location. Taken collectively and by cross-reference this becomes a commercially dependable and globally significant new resource to enable us to BLOOM DESERTS.

Please note how the components here of the ‘Bloom the Desert’ project- when taken together represent a completely revolutionary approach to bringing green back to even the most arid areas of Mother Earth. For example, our network of profound dowsers specialists in deep or primary water are able to confirm drill site locations, easily and economically and with a proven track record.

# Daniel Winter

A Pioneer of the Theories of the “Fractal Universe” and Implosion Dynamics

Regarded as one of the most dynamic thinkers of our time, American-born Daniel Winter is an internationally respected academic, physicist, author, accomplished keyboard artist, master animator, inventor and one of the foremost authorities on Implosion, Gravity creation, Golden Mean ratio and the true nature and applications of the “Fractal Field”-a term he coined and now famous for.

Dan is constantly formulating breakthrough ideas about the deep connectedness of all things and how the profound nature of our “oneness” can be approached via sacred geometry, architecture, art, math, biology, computers, electronics, biofeedback and myth. His theories have formed the basis of notable research worldwide.
